

# Smart lighting and its usage in galleries

**XICATO®**

# What can smart lighting offer to galleries?

- A deeper, richer visitor experience
  - Light quality: sustained, accurate colour portrayal
  - Location-based information services
- A more sustainable operation
  - Maintenance savings
  - Energy savings
  - Conservation management
  - Easier (re) commissioning
  
- Three fundamental questions

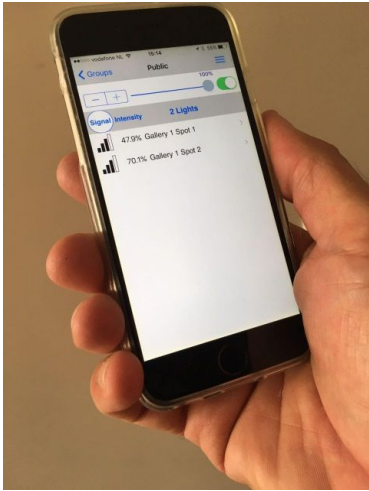

Van Gogh Museum, Amsterdam.  
Lighting Design by Henk van der Geest  
Luminaires by Mike Stoane Lighting

# Light quality for architecture, artwork, people

**XICATO®**

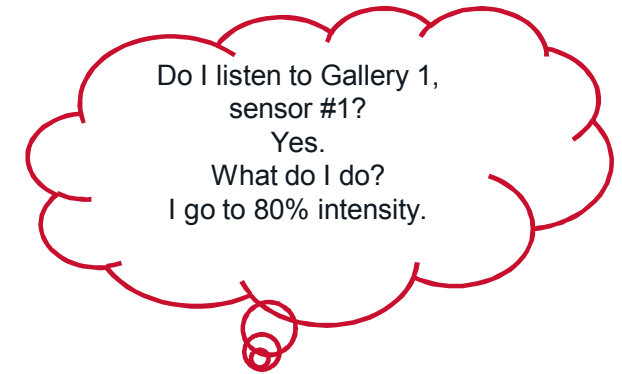

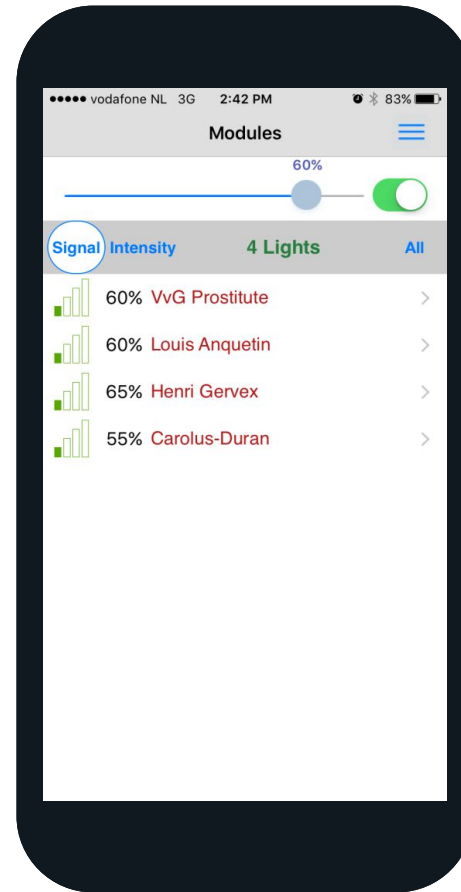

# Peer to peer communication

**XICATO®**

*No wires. No centralized controller.*

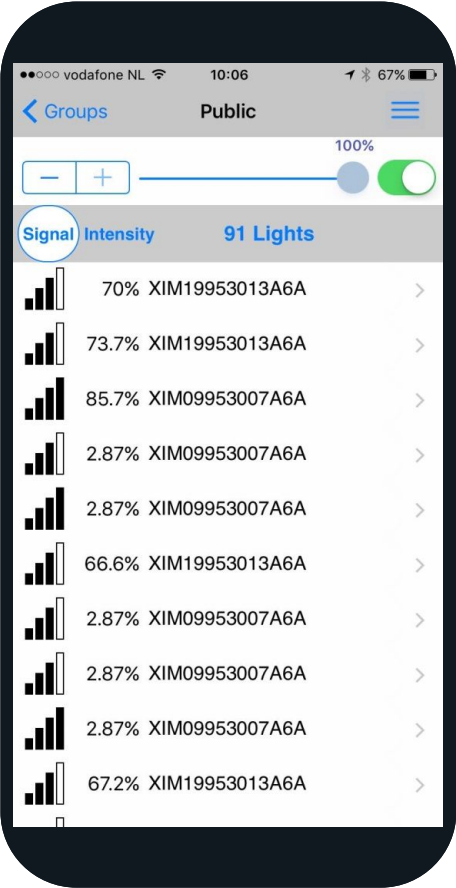

# Easier (re) commissioning

**XICATO®**

Turn around and scalability

# Commissioning at Museon, The Hague, 19<sup>th</sup> October 2016

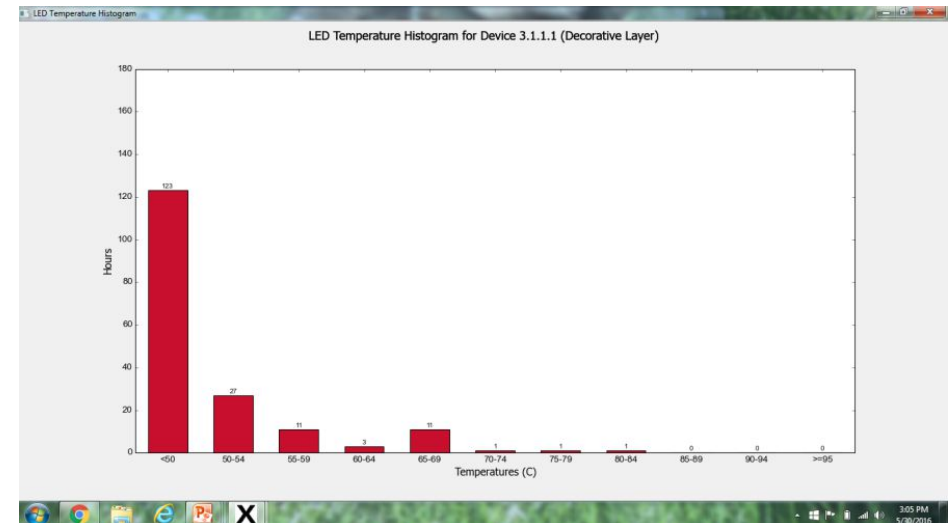

**XICATO<sup>®</sup>**

# Maintenance savings

## Maintenance savings:

- Prolonged life through auto protection
- Real-time status and preventative maintenance
- Historical data
  - Payback claim verification

# Energy saving via SUBTLE use of sensors

- Natural light
- Movement

**XICATO®**

# New ways of communicating, 1

## Using sensors

- Experience
- Revelation
- Not just enhancing characters in a play; lighting is a character itself

**XICATO®**

# Conservation management using sensors

## Managing light exposure to minimise photochemical action

- Light dose (Lux-hours / year) is a function of:
  - The spectral sensitivity of the illuminated object
  - The spectral power distribution (SPD) of the light
  - The Preservation Target (years, decades, centuries, millennia)
- Methodologies
  - Limit when the art is shown (frequency or duration). Lighting is fixed during opening times
  - Above, plus vary lighting during open times according to a fixed schedule, eg for the Ardabil carpet at the Victoria & Albert museum
  - Above, with smart lighting linked to occupancy and ambient light sensors

Category	LOAED	Preservation Targets		
		1000 yrs	100 yrs	10 yrs
High Sensitive ISO 1, 2, 3	ISO 2: 1.0 Mlx hr	50 lux for 20 hrs/yr	50 lux for 25 days/yr  500 lux for 25 hrs/yr	50 lux for 250 days/yr  500 lux for 25 days/yr
Medium Sensitivity ISO 4, 5, 6	ISO 4: 10 Mlx hr	50 lux for 25 days/yr  500 lux for 20 hrs/yr	50 lux for 250 days/yr  500 lux for 25 days/yr	340 lux for 365 days/yr  500 lux for 250 days/yr
Low Sensitive ISO 7, 8, above	ISO 7: 300 Mlx hr	100 lux for 365 days/yr  500 lux for 75 days/yr	1000 lux for 365 days/yr (500 lux/yr for target 200 yrs)	

# Conservation management using sensors

- Position sensors next to paintings and calibrate
- Set desired maximum light level on each painting
- Program exposure limit (lux hrs) into app for each painting
- App estimates display time at that level (hours per season)
- User tweaks parameters periodically to achieve actual desired display time
- User to set illumination level for painting when no presence is detected
- Database tracks and displays occupancy, lux levels and lux hours for each painting, with advice
- Alarm function

**XICATO®**

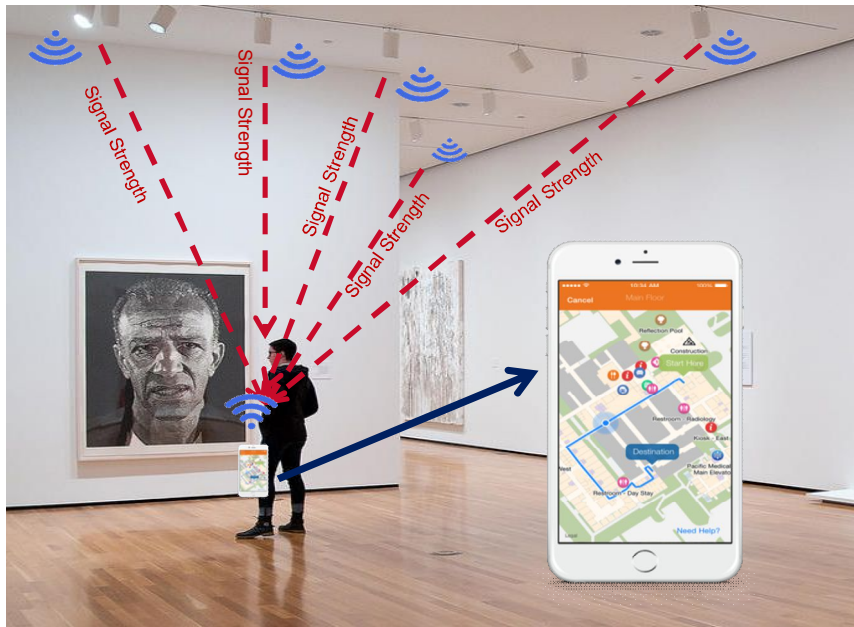

# 'Spider Sense'

**XICATO®**

## Indoor positioning

**XICATO®**

# Hypothetical application

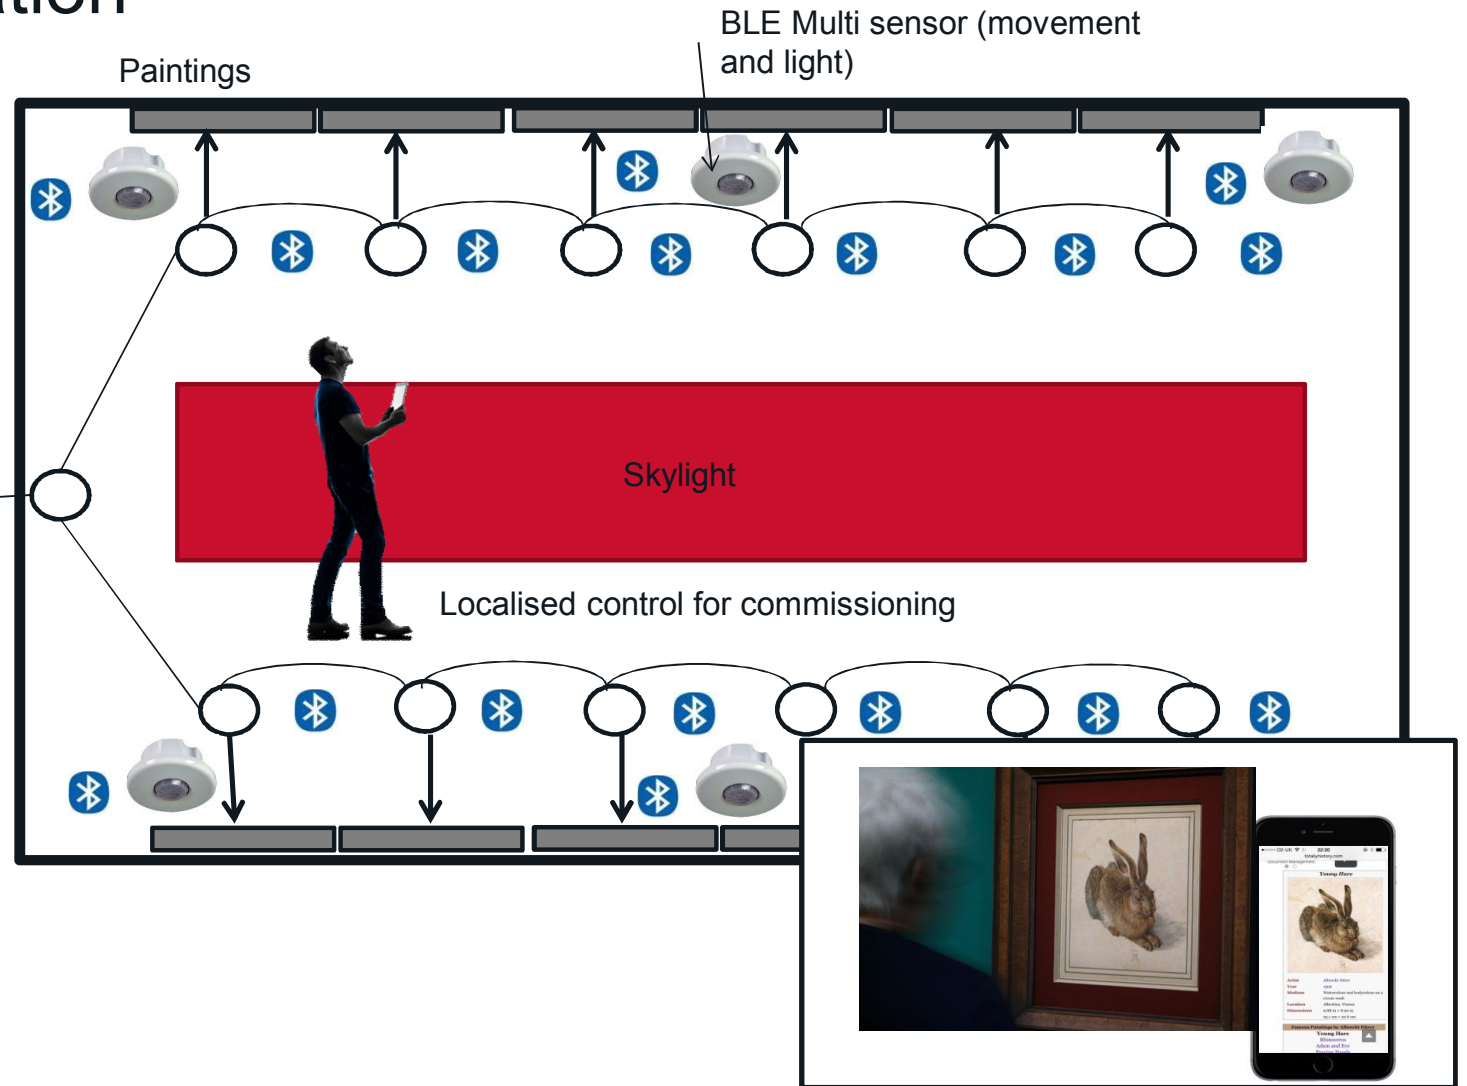

Wallace Collection, London  
Lighting Design: SVA  
Luminaires: MSL

Administration  
& Database

BMS / CMS

- Overall power management
- Energy data
- Maintenance alerts

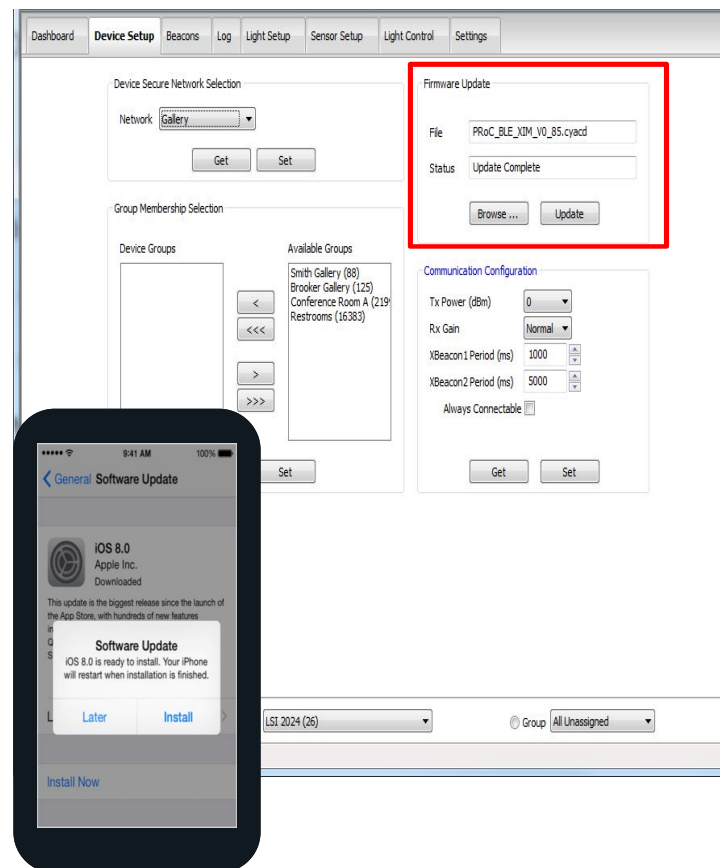

**XICATO®**

Three fundamental questions

**XICATO<sup>®</sup>**

# Affordable?

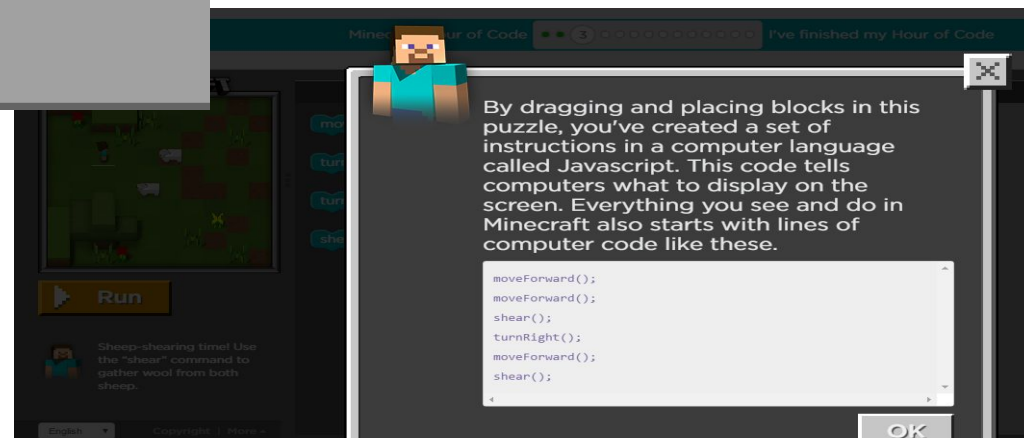

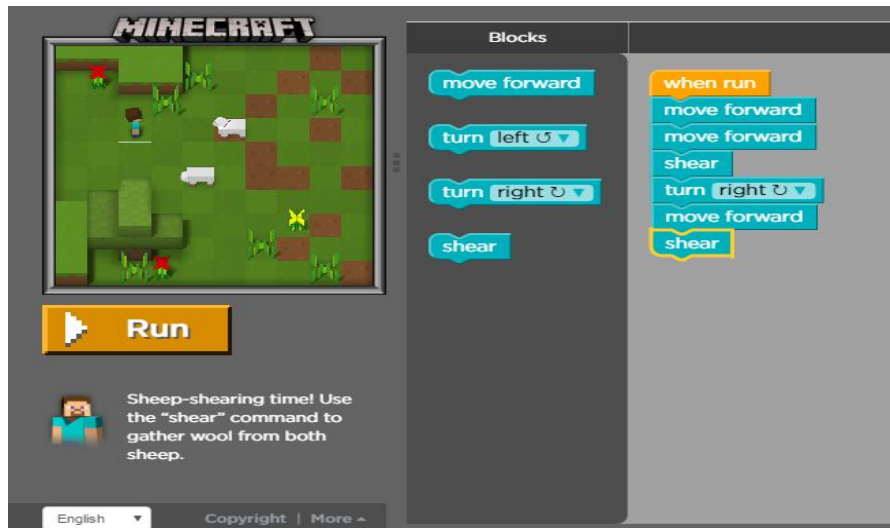

- Reduced system costs c/w traditional
  - Dimming driver integrated into module
  - No control wires and no hub
  - Use existing smartphone and/or tablet for commissioning and usage
  - Free software
- Design and installation
  - No communication wiring to be installed
  - Modules preconfigured with position data linked to lighting plan
  - One and not two people to install control plan
  - All upgrades are OTA

**XICATO®**

Intuitive to use?

**XICATO<sup>®</sup>**

Usage of apps demystifies controls and bring usage from the elite to the all

# Interoperable?

## interoperable prototype test events (iop)

Interoperability is essential to all Bluetooth technology solutions.

For consumers, interoperability means that Bluetooth enabled products work together the way they are supposed to. For developers, it means that Bluetooth technology solutions support compatible profiles and roles.
